# A NATURAL SOLUTION FOR SENSITIVE TEETH

RECOMMEND TO YOUR PATIENTS THE 2-IN-1 SOLUTION THAT:

- Lets them brush their teeth with MI Paste® ONE
- Fights caries, rebuilds enamel, and relieves sensitivity
- Delivers the same clinical benefits of MI Paste Plus®
- Does not contain sodium lauryl sulfate
- Has low abrasivity (RDA 64)

## The MI Paste® Family

MI Paste products are the first of their kind – containing naturally derived milk protein for safe and effective treatment of sensitive teeth, white spot lesions, and remineralization. MI Paste Plus and MI Paste ONE are the only *natural solution* of their kind to deliver calcium, phosphate, and fluoride to your patient's teeth that provide powerful relief from sensitivity.

## MI Paste® ONE

The newest member of the MI Paste family is a two-in-one application (toothpaste and MI Paste Plus) containing RECALDENT™ (CPP-ACP) and fluoride, in a cool mint flavor. MI Paste ONE is another way for your patients to safely and naturally:

**REMINERALIZE – REBUILD ENAMEL – RELIEVE SENSITIVITY**

**MI Paste®**  
**ONE** Clean & Protect

## The Effective Delivery Vehicle for Fluoride

When fluoride meets RECALDENT™ (CPP-ACP), the peptide preferentially combines with, and stabilizes, fluoride to create the ideal source for building fluorapatite. Using bio-available calcium and phosphate, the full potential of fluoride to help protect and repair teeth can be achieved.

### Use MI Paste® ONE for:

- Hypersensitivity
- Sensitivity from whitening
- Remineralization
- Prevention of caries
- Prevention of white spot lesions
- Tooth erosion and wear

Can also be used by patients suffering from dry mouth syndrome.

## How to Use

1 Apply MI Paste ONE to toothbrush.

2 For best results, brush for 2 minutes, expectorate and do not rinse; refrain from eating for 30 minutes. Use twice a day.

## Choose the Right MI Paste® Solution for your Patients:

MI Paste®	MI Paste Plus®	MI Paste® ONE
10% RECALDENT™ (CPP-ACP)	10% RECALDENT™ (CPP-ACP) 900ppm NaF	10% RECALDENT™ (CPP-ACP) 1,100 ppm NaF and silica 5% KNO <sub>3</sub>
